Catalogue of ICT Companies from Moldova
Republic of Moldova is a country situated in the South Eastern Europe, bordered by Ukraine in the north, East and South, and Romania in the West. In the past 4 years, Moldova has made good progress in its dialogue with the European Union, concluding negotiations on a number of country relevant important issues, such as customs cooperation, the setting-up of a common aviation area, protection of geographical indications and association to the various scientific and research programs of the European Union which opens up access to EU thematic programmes. With these agreements, Moldova has been among the strongest performers in the Eastern Partnership countries aspiring to conclude Association Agreements with the European Union.

Even though, Moldova is mainly recognized as an agricultural country, that has encountered massive progress of industry development in the last years, passing from traditional industries to the implementation of services and progressive technologies in the construction and food processing fields.

The economic performance also has been relatively strong, aided by improved fiscal, monetary and exchange rate policy. So, country experienced the highest cumulative GDP growth, relative to the pre-crisis year of 2007, in the region. Despite of this, growth has been volatile because of climatic and global economic conditions. GDP increased, driven by a record harvest, by 9.4 percent in 2013. Due to the weak economic activity of major economic partners and Russian trade restrictions, growth decelerated to a still strong 4.7 percent in January-September 2014, y/y.

ICT industry represents 8% of the country GDP Rich in culture and educated labor force, Moldova becomes an attractive point for off-shoring, outsourcing and investment. Moldova offering an attractive climate to business development, relatively competitive business costs in the region, educated labor force with 2000 graduates per year in the field.

Graduates come from universities with long and internationally respected technical traditions (they benefit from once being a prestigious part of the former Soviet system). Placing strong emphasis on engineering and computing fundamentals, the schools have embraced free market principals to drive quality. They also work with private software development firms in designing programs to better match the needs of the private sector. The majority of the population trained in the ICT field (is multilingual and highly skilled.

The Government has undertaken the initiative to support the competitiveness of the ICT sector through as a reliable partner for local companies and potential external partners though favorable business environment, incentives to the ICT sector, higher demand for ICT services and solutions.
Moldovan Association of ICT Companies

Who we are?

Business Organization uniting 36 companies.
Umbrella Organization gathering over 9000 employees.

Being established in 2006, we have constantly grown into a representative association sharing a common goal, a common vision and working together on a large series of interventions and projects.

Our Mission:

Advance the competitiveness of the ICT sector and promote the ICT as a core enabler for national economic development.
On the international stage the Moldovan Association of ICT Companies promotes the industry’s potential as a reliable business partner for international IT and BPO outsourcing clients.

Until now, we have had the possibility to work on several priorities determined internally:
• Workforce interventions
• International and export promotion activities
• Improving and determining a better business environment (fiscal, legal, intellectual property rights)
• Bringing the sector players together
• Training and excellence support for the companies

Our Vision:

The ICT sector will be the main driver behind the Moldova’s economic growth, augmenting labor productivity and enhancing international competitiveness.

Objectives:

1. To raise the Moldovan ICT & BPO industry’s profile and image within the country and on International markets.
2. To raise the level of co-operation and collaboration amongst members of the Moldovan ICT & BPO business community.
3. To work with Government to improve the business context, legal framework and overall prospects for the sector.
4. To collaborate with Moldovan Educational institutions to improve over time the quality and quantity of ICT trained graduates.
5. To help improve levels of professional & management skills within ICT & BPO companies.
6. To improve all aspects of investment opportunities for ICT & BPO enterprises in Moldova.
Advanced Profile
Companies
Aculocity is an international technology company that develops customized, mission-critical software. We serve a diversified portfolio of clients with our talented pool of technologists, based in the USA, Moldova and South Africa. Our domain experience includes the following industries: manufacturing, distribution, automotive, aviation, marketing and consulting. Our primary mission is to improve our client’s business capabilities, through utilization of the most appropriate technologies and processes.

We strive to build strong professional relationships with our clients. Our core competency is reflected in our tagline: “DOMINATE YOUR DATA”. Data is the primary asset of any modern business. All technology solutions compliment data through presentation, manipulation, access frameworks and patterns. We create custom analytical solutions using both structured relational, and unstructured “Big Data” technologies. Acudev is a division of Aculocity.

Allied Testing is a leading specialist QA and testing firm with the sole focus on the capital markets, trading and finance industry. Over the years we have earned a reputation of premiere application quality management specialists. We work with CIOs, VPs of Development and Quality Directors to improve stability and resilience of their systems, develop or fine-tune QA and sourcing strategies, and take on nontrivial testing tasks, while simultaneously driving down costs of testing.

Allied offers its clients a full range of QA capabilities that range from process audit and strategy consulting to implementation and ongoing service delivery, and includes both onsite and offshore or nearshore locations.

We have a strong experience acting as QA Center of Excellence in global, distributed, multi-vendor development environments. Our flexible engagement model allows our clients to manage peaks and valleys in their staffing requirements.

Deep domain expertise, global footprint and superb technical capabilities of our staff have enabled Allied to become a Quality Assurance partner of choice to such companies as Thomson Reuters, Barclays Capital, Renaissance Capital, HSBC, JP Morgan, and others.

Allied Testing has offices in USA, UK and Cyprus, with its test labs based in Moldova, Belarus, Russia and Serbia.

Cedacri International has been a member company of the Cedacri Group since 2008, when it was founded in the capital of the Republic of Moldova. The company provides software and business process outsourcing services to banking sector clients.

For over the past 30 years Cedacri Group has held a leading position on the outsourcing services market for banks, financial institutions and industrial companies. Numbering 40 million daily managed transactions, serving 40,000 system users, operating a mainframe that has an elaborative capacity of 30,000 Mips and 4000 servers, Cedacri uses one of the most potent data processing centers in Italy. The Group estimated turnover for 2013 amounted to 246,8 mln Euro. By turning to Cedacri and implementing its outsourcing solutions, the clients of the company obtain such significant advantages as:

- The possibility to accomplish projects of any dimension and difficulty level;
- Guaranteed timely and high quality services;
- Reduced production costs;
- The support from behalf of a highly trained team for any kind of task.

Being backed professionally as well as financially by one of the leading companies in the field of software and business process outsourcing since 2008, Cedacri International has shown a significant increase in staff quantity, occupied office surface, project flow and output quality. Our team has gained abundant experience in such a specific domain as the international financial and banking services sector by accomplishing projects for the clients of Cedacri Group.

Makler Company is a team of motivated, dynamic and adventurous young professionals, offering advertising services since 1991. One of our main priorities for today is to develop a successful website: www.makler.md.

Perfectly customized search for relevant ads, convenient preview mode option, efficient sorting algorithms, on-line chat between users, mobile version - we have done all this for our users and still not ready to rest!

Our website and newspaper are two interrelated parts of a single system. Now, any user can place an ad in the newspaper through our website, and in the case of publication of the ad in the newspaper, it is placed on the website as well.

When using our website, you can choose from the available region options: Chisinai, Balti, as well as other regions in Moldova, Tiraspol and Ribnita in Transnistria, Odessa and Nikolaev in Ukraine.

The ads posted on our website are free. On further processing, any user may choose a whole range of fee-based services.

For over 20 years we are working as a single system, constantly developing and improving the work of the whole team. We are able to find an individual approach to each client, because it is important for us to avoid the consumer attitude and choose a long-term mutually beneficial cooperation.

Microsoft Mission in Moldova is increasing partners and customers satisfaction of our technology, professionalism and honesty contributing to the development of local IT industry through implementation of corporate business model.

Microsoft in Moldova has proposed since its establishment following business objectives:

• generate business initiatives, investing long term, Microsoft and business partners
• facilitate people’s access to technology in this region of the latest generation software
• skills and talents to form, organize training activities, provide technical information and to locate products.

Microsoft in Moldova is active and makes positive impact to economy development. Microsoft drives innovations and technologies to increase maturity or all areas on national economy. Microsoft collaborates with government institutions to implement innovations to social life and minimize barriers for contacts with society. We drive business via partner-centric business model and cloud technologies delivery and cost efficiency. We are happy to present our initiatives for Education to increase level of IT awareness and help talents, startups to develop their IT skills.

Microsoft IPR protection is for healthy legal business institutions and instruments open for international economy community. As a devices and services company, Microsoft is delivering technologies to market that will transform the computing ecosystem, deliver great experiences to consumers, and help businesses worldwide take advantage of mobile, enterprise social, and cloud computing trends to drive growth.

Education is a core part of making technology a priority, because it is a significant step to start with for achieving ROI. Besides its YouthSpark programs (like PiL, DreamSpark, BizSpark & Imagine Cup), which builds on the Office 365 for Education platform to provide schools, teachers and students with the latest tools for online collaboration.

Many non-profit organizations in Moldova have already benefited from Software Donation program in Moldova. One of the latest results in Moldova is partnership with Global Libraries initiative. Shared access to computing is a priority for Microsoft Moldova, which donates software to non-profits and sponsors e-skills trainings throughout Moldova.

Noction is a privately funded technology company with offices in North America, Europe, and Asia. Founded in 2011, Noction is a fast-growing company providing BGP network performance automation, enabling enterprises to take full advantage of the maximum network performance for business-critical applications such as e-commerce, VoIP, and media streaming across IP networks.

Noction provides Internet route optimization solutions for hosting providers, telecom companies, Managed Service Providers and other enterprises that run multiple ISP connections. ATIC member

Noction's flagship product – Intelligent Routing Platform is designed to optimize traffic routing in the middle-mile segment of the Internet by automatically rerouting traffic through the best performing ISP.

Industries
Telecom, Software, Internet

Markets
Telecom, Software, Data Centers, Hosting Providers, Managed Service Providers, VoIP Providers, E-Commerce, Media Streaming, Internet Service Providers

Products
Noction Intelligent Routing Platform enables enterprises and service providers to maximize end-to-end network performance and safely reduce infrastructure costs.

The platform evaluates critical network performance metrics and responds quickly to automatically fix problems and actively prevent congestion. IRP also adds the ability to generate massive cost savings by intelligently balancing traffic among the connected ISPs.

Noction IRP incorporates billing structures into its policy models, in order to adjust and keep predefined bandwidth commit rate levels for each provider link.

The benefits of using IRP in a multi-homed network are:

- Avoid end-to-end network congestion
- Minimize latency and packet loss
- Put unused network capacity to work
- Single point of visibility and control for cost & end-to-end performance
- Bandwidth management for outbound traffic
- Improve performance and reliability with real-time optimization for all IP traffic
- Balancing routing over less expensive networks with no loss in performance
- Providing reliable routing quality without over-provisioning
- Increasing the productivity of network personnel

Tacit Knowledge is the digital commerce consultancy that delivers Silicon Valley innovation to retail organizations around the world. Founded in 2002 by a group of software engineers, Tacit implements packaged applications and builds custom software for globally recognized multichannel organizations, including some of Internet Retailer’s Top 25. Our areas of expertise include: development and integration, stabilization and tuning, continuous deployment. These efforts include network operations, provisioning, monitoring, software support, test automation, deployment scripting, and the incorporation of advanced technologies.

The ultimate goal is a better economic model, one that our clients leverage to analyze, adapt, and outpace the competition. Principals and mechanics derived from Extreme Programming, Agile, and Lean Manufacturing factor highly, but at the core Tacit Knowledge is a company built around the belief that software is a craft. As such, success ultimately hinges on the experience and skill of the practitioners.

The company is headquartered in San Francisco and has also offices in New York, London, Chisinau, Guadalajara and Sydney.

Headquartered in Santa Clara, Calif., Intel today has more than 100,000 employees in 63 countries and serves customers in more than 120 countries. Intel designs and manufactures a variety of essential technologies, including microprocessors and chipsets and the additional hardware, software, and related services that jointly form a basement of compute devices.

Over the last decade Intel has evolved from a company that largely serves the PC industry, to a company that increasingly provides the vital intelligence inside all things computing. In fact, one-third of Intel’s revenue is associated with products beyond the PC. Hardware and software products by Intel and subsidiaries such as Intel Security power the majority of the world’s data centers, connect hundreds of millions of devices and help to computing and IT infrastructure. Intel technologies empower intelligent systems, such automotive, manufacturing and healthcare.

Software Development, ATIC member

Intel Core™ Processors power a variety of digital devices, including desktop PCs, laptops, all-in-ones, Ultrabook™, and convertible 2-in-1s.

4th Generation Intel® Core™ Processor family ushers in a new wave of Ultrabook and emerging 2-in-1s that deliver a PC when you need it and a tablet when you want it. New Intel Core advances Ultrabook and expresses the vision which has been outlined by Intel 2 years ago to deliver best-in-class performance, impressive responsiveness and long battery life and built-in security in thin and stylish mobile designs. Intel continues to drive product adoption and tremendous innovation of its partners. Ultrabook designs spread across a range of different price points. Vast majority of new systems are equipped with touchscreens and appear in new innovative form factors. Notebooks less than 1 inch thick have increased 18 times since Ultrabook debuted.

Intel® Atom™ Processor is designed for low-power system designs for different market segments from smartphones to tablets, to all-in-ones, to data centers as well as affordable Internet- devices. Intel® Atom™ introduced in 2008 appeared in tablets, entry-level PCs, smartphones, storage and networking solutions and microservers, and across several embedded market segments. Smartphones with Intel Atom inside appeared in 2012 in 30+ countries, spanning South East Asia, China, Europe, and Latin America.

Intel Xeon® Processor provides industry-leading performance energy efficiency and built-in hardware virtualization technology for server, workstation and storage platforms in a wide range of entry-level to high-end computing, including high-performance and cloud computing.

Intel Security provides security solutions for consumer, mobile and corporate environments through a combination of hardware and software designed to protect systems from malicious virus attacks as well as loss of data.
Our company’s mission is to provide the market a reliable IT equipment and services and to help our customers in achieving new possibilities in information technology.

MCS Computer Center was created in 1995 and during its existence became a strong and continuously growing company.

Customers are a great value and a guarantee of prosperity that is why our main purpose is to help our customers to progress and achieve new results. For many years, our company has been a partner of the leading world manufacturers of computers and office equipment, such as Philips, HP, Apple, Acer, D-Link, AsRock, Chicony, Spire, A-Data, Microsoft, and other that provides guarantee of quality and product safety.

Moldtelecom is the national telecommunications operator in Moldova. Incorporated on April 1st, 1993 as a state company. In 1999, Moldtelecom became the largest electronic communications Corporation in Moldova and in 2001 we’ve been the first-ever operator, to deliver internet services to everyone.

Throughout 2005, we’ve enabled the first national broad-band service in Moldova, enabling schools, libraries and individuals to explore digital services such as internet, data transmission and VOIP services, at the highest quality and sustainability levels.

In 2006 we’ve made out landlines mobile, supplying communication needs in the most remote areas. In the same year, we brought all the ISP together, developing the first-ever national data Exchange network. In 2007, we’ve became more flexible and mobile, delivering the first voice and data services via CDMA.

In 2008 we’ve supplied our networks with the power of optic fiber and brought it to our customers.

The 2010th year brought entertainment to each of our customer’s homes via high-quality IPTV services. Our mobile data and voice plans, have been powered by the 3rd generation technology, enabling our customers to experience HD Voice and deliver mobile Broad-band services at higher speeds.

As of 2014, we own the greatest 100G network, enabling everyone to benefit of the highest broadband speeds (1Gbps) all across the country.

Today we are the number one operator on the internet and data transport market. Our main goal is to power up societies with the most state-of-the-art technology at the fastest speeds, delivering actual value to each subscriber.

Orange Moldova is a part of the Orange Group, an international leader in the telecommunications services. In Moldova, the company had started its activity in 1998 under the brand Voxtel. 9 years later, on 27th of April, Voxtel became Orange Moldova.

Today, the company is the number one operator on the Moldovan TELCO market. In its portfolio Orange has over 1000 employees and 2.6 million customers. Orange Moldova has the largest 3G+ and 4G coverage. The company’s services can be accessed throughout the country through the distribution network – 3600 points of sales. Also, customers can ask for advice over the phone, Orange providing assistance 24/24 hours.

The status of the company as a leader in innovation was confirmed by 2 world premierses: HD Voice and HD Voice International. Orange Moldova is a socially responsible operator, a status confirmed by the work of the Orange Foundation in the country. Since its launch, OMF had implemented over 50 projects in various fields, whose beneficiaries became 180 000 people.
StarNet is a privately-owned telecommunications company, one of the leading ITC organizations from Moldova. Since 2014, StarNet comprises a group of 10 profiled companies, organized as a holding. Taking into consideration the fast development of the technology, the company continuously attempts to keep the pace of the hi-tech evolution by integrating new equipment and providing quality customer service. During 11 years of existence, StarNet has managed to become one of the most popular and respected brands in Moldova, being highly appreciated by both experts and clients for the ability to meet the needs of its customers and for implementing new technologies in the field. StarNet is a company that focuses on creating the basis of the future, in which everyone could benefit from modern technologies that improve life at good prices and quality services.

One of the company’s primary goals is to provide integrated solutions for everybody, which is why it continuously improves its services. StarNet has its own fiber optic network – the only company to have developed a fiber optic network of such a complexity in Moldova – and started to expand from the capital city to the entire country, now being present in 15 cities, covering households and businesses from North to South, West and East of Moldova.

Switchover AG, formerly Switchward International Group AG, is a Swiss Company operates in the wholesale telecommunication market. The core business is concentrated on collecting and terminating significant volumes of voice minutes traffic on behalf of important international clients.

Switchover via its own daughters companies is active in the TLC field since 2003, when Switchward Ltd was established in London. From December 2004 it became a Swiss telephone operator.

Switchover is registered as a telephone service operator by UFCOM (nr. 2000752) and by ANRCETI (AC000303 and AC000334).

The company avails of bilateral interconnection contracts in TDM/VoIP with the most important worldwide telephone operators, who are both customers and suppliers and solid partnerships with the major optical fiber suppliers via whom Switchover can grant high quality standards.

Switchover SRL is based in Moldova. Currently all the activities of this company are devoted to the development and assistance of all the applications aiming to support the activities of the mother company. The Chisinau office employs Oracle developers and certified specialists as well as sales resources working for the back office of Switchover AG. Switchover SRL is performing the NOC activity (Network Operation Centre) monitoring all the different POPs and systems running 24/7 hrs, Monitoring and Ticketing, anti-fraud monitoring and back office for wholesale activity.
